Verdict per reference 3
Reproducing this audit 4
Re-verification 4

Every entry in `paper/wrr/references.bib` was compared, field by field, against the publisher's own metadata. The method was:

1. resolve each DOI through `https://doi.org/<doi>` with `Accept: application/x-bibtex` (the publisher-deposited BibTeX);
2. fetch `https://api.crossref.org/works/<doi>` for the structured record (author list, container title, volume, issue, pages, print and online dates);
3. for the four entries without a DOI, fetch the publisher or agency page and read the metadata from its `<meta name="citation_*">` block;
4. normalise both sides (LaTeX accents, braces, capitalisation, dash style, `--` versus `-`) and compare authors, title, venue, volume, issue, pages, year and DOI. A field counts as wrong only when the normalised strings differ.

Corrections applied

key	field	was	now	evidence
`corona2025`	first author's given names	Corona, Claire R.	Corona, Claudia Rebecca	Crossref deposit 10.5194/hess-29-2521-2025
`corona2025`	last author's given names	Hogue, Terri S.	Hogue, Terri Sue	same
`isaak2017`	author 12	Horan, Dona	Horan, Dona L.	Crossref deposit 10.1002/2017WR020969
`isaak2017`	author 13	Payne, Sharon L.	Parkes-Payne, Sharon	same; the byline is hyphenated
`li2017`	issue	2	1	Crossref: volume 28, issue 1, print 2017-02
`mauger2015`	last author	Bogan, Daniel	Bogan, Dan	Crossref deposit 10.1016/j.ejrh.2015.07.008

key	field	was	now	evidence
zaoui2020	author order	Zaoui, Denis, Hebiri	Denis, Hebiri, Zaoui	arXiv 2006.16597 and HAL hal-02883996 both list that order
wac2024	section cited	WAC 173-201A-020 and -200	WAC 173-201A-200	the legislature's table: 173-201A-020 is "Definitions", 173-201A-200 is "Fresh water designated uses and criteria"
wac2024	title	added the two section numbers to the title	chapter title only, sections in the note	chapter heading is "Water Quality Standards for Surface Waters of the State of Washington"
nasapower2026	title and venue	"POWER daily data, T2M (MERRA-2)", "Prediction Of Worldwide Energy Resources project"	product description plus the project's full name, access year in the note	power.larc.nasa.gov product naming

A second defect is not a field error but a citation-management one: eight entries (hare2023, jackson2025, sanikhani2026, wang2025, you2026, zhang2011, angelopoulos2022, bai2026) existed in **both** references.bib and references_additions.bib. With \bibliography{references,references_additions} BibTeX keeps the first copy and logs a repeated-entry warning. The additions file is now a comment-only provenance note, so each entry has one source of truth; wrr_manuscript.blg reports zero warnings after the change.

Accepted, documented differences

key	difference	why it is kept
caissie2006	Crossref deposits "Caissie, D."; the entry has "Caissie, Daniel"	the full given name is the author's published name; the initial is an abbreviation, not a different person
zhang2011	Crossref parses the author as "Tank, Albert Klein"; the entry has "Klein Tank, Albert"	"Klein Tank" is the surname; the Crossref parse splits it wrongly
li2017	Crossref's BibTeX says 2016; the entry says 2017	2016 is the online-first date; the article is in volume 28, issue 1, February 2017. The issue year is the citation year; the online date is recorded here
falcone2011	Crossref returns a record with no title and no author	the DOI landing page confirms the title and "Falcone, J.A., 2011"; the entry uses that

key	difference	why it is kept
geifman2017, zaoui2020	no DOI	NeurIPS proceedings have no DOI; verified through the proceedings page (Geifman) and arXiv/HAL (author order, Zaoui)
wang2025	DOI is not in Crossref	the publisher page ck-yyb.crsri.cn/CN/10.11988/ckyyb.20240856 gives author □□□ (Wang, Sheng-hui), volume 42(10), pages 54–63, 2025, and the English journal name

bai2026	Risk-controlling predictive sets for time-series events under selective observation	match

Reproducing this audit

`python3 scripts/338_wrr_reference_audit.py` (or `make wrr-reference-audit`) re-fetches the deposits (cached under `scratch/reference_audit/authoritative/`) and re-runs the field comparison. It prints one line per entry and exits non-zero if an unexplained difference appears; the five documented deviations above are whitelisted with their reasons in the script.

Re-verification

After the edits, the same comparison was re-run. Every entry with a machine-readable deposit matches on authors, title, venue, volume, issue, pages, year and DOI, except the five documented deviations above. The build logs zero BibTeX warnings, renders 27 entries, and the manuscript's citation keys are unchanged, so no prose needs updating.
