1 data and reconstruction
Reference truth
5,114 station-years
Designed outages
53,721 cases
Reconstruction policy
5 methods, leave-one-year-out
Admitted object
error e; fail if
e > 0.5 °C
labels for calibration
failure event
2 admission rule
Decision-time features
22; no hidden day
Scores
ℓ, ĥ, b, fitted q0.9
Calibration
5 folds × 3 seeds
clustered 5% band
Decision
s ≤ τ: admit
else abstain
3 what it changes
Error and retention
among admitted years
Hot-year composition
admitted, refused, missed
Regime boundary
peak observed? then
admit everything
