Assembled source archive
581 stations; 185 connected groups
6,170 complete station-years
Observed-window evidence
Incomplete reported years
No reconstruction
Single-year source cases
Annual recovery and release tests
Held-group source roles
Jointly degraded target archive
All selected gaps masked together
Refit local daily stages
Observed bound vs.
complete-year record
Annual scores; numerical
release, bound or unknown
Fixed source annual models
Finite-record trends and
rank-coupling sensitivity
Hidden target days are excluded from local fitting. Visible target and donor records remain usable.
The release-then-trend working likelihood is a separate exploratory analysis.
